Certifications

Bruynzeel Storage Systems was founded in 1897, and is a pioneer in storage solutions since 1953.

At Bruynzeel, we understand the unique challenges museums face: growing collections, limited space, and the need for optimal preservation. With over 70 years of experience, we design and manufacture high-quality, space-saving storage systems tailored to the needs of cultural institutions.

Across the globe, our solutions protect collections of every size, whether for private collectors, local museums, or internationally renowned institutions. Whether it's paintings, sculptures, textiles, or archaeological finds, we help to store and protect collections with care and precision.

Committed to Sustainability

Bruynzeel is the most sustainable manufacturer in the storage industry. Our production is powered entirely by renewable energy and our own operations are climate neutral (Scope 1 & 2, GHG).

We focus on responsible material choices. Our storage systems are made from highly durable steel, including our Bruynzeel GreenSteel® options, and are designed for long lifespans with components that can be reused or recycled at the end of use.

This combined approach to clean energy, sustainable materials and long-term product design helps museums reduce their environmental footprint while safeguarding cultural heritage for future generations.

We Protect What Inspires

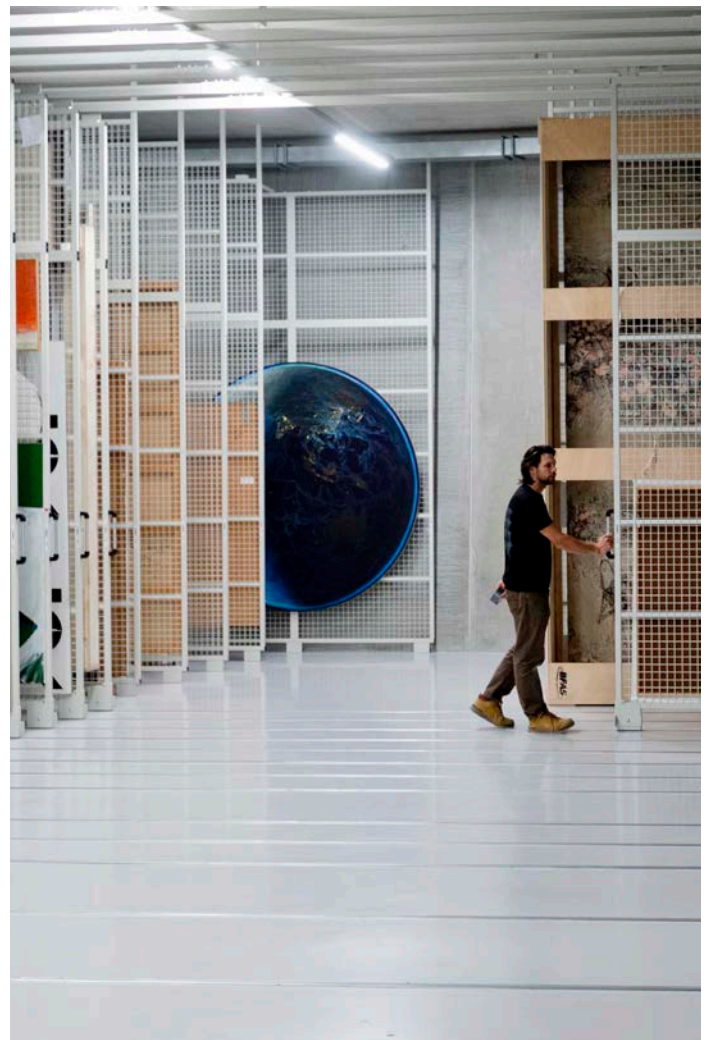

Museums care for valuable, delicate and often irreplaceable collections. Storage environments must support conservation priorities while providing safe and practical daily access for staff. Bruynzeel's museum storage solutions are designed to help preserve collections by ensuring they are stored in a stable, well-organised and protective way.

Our experience in museum storage allows us to offer storage solutions that make the best use of available space, provide smooth and quiet operation and ensure that objects can be accessed safely. Every system is built with materials and finishes suitable for long-term preservation.

Key Benefits of Choosing Bruynzeel Storage Systems for Museum Collections

Our storage solutions can support everything from paintings to textiles, archival materials, scientific specimens, archaeological finds, large objects and mixed collections. They also deliver the following benefits:

- Smooth, low-vibration movement for safe handling
- Safe, comfortable and ergonomically designed access for staff members
- Durable materials suitable for conservation environments
- Configurations that adapt to building requirements and collection needs
- Systems that can expand as collections grow

Museum Storage for Every Collection

Our Museum Storage Solutions:

Pull-Out Art Racks

Ideal for flat artworks, textiles and long objects, with a smooth top-down sliding motion for easy, safe handling.

Museum Grade Cabinets

Protect sensitive materials with airtight sealing that supports a stable, passive microclimate.

Mobile Shelving Systems

Space-saving storage, manual or electronic operation, with two-level electronically systems available.

Modular Drawer Units

Ergonomic, secure and customisable storage for small objects, fossils, coins and tools.

Static Storage Solutions

Reliable and flexible storage solution for mixed media, boxed items, books and textiles.

Large Object Storage

Custom storage for sculptures, furniture and large artefacts, designed for safe and easy handling.

Safe and Efficient Art Storage

Pull-out Art Racks

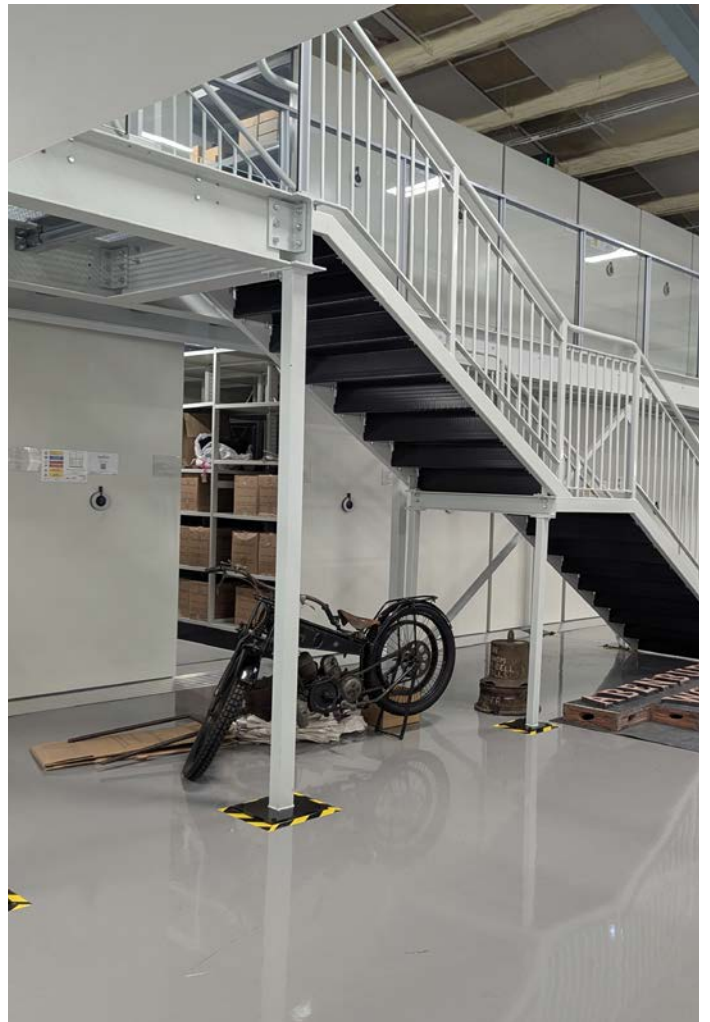

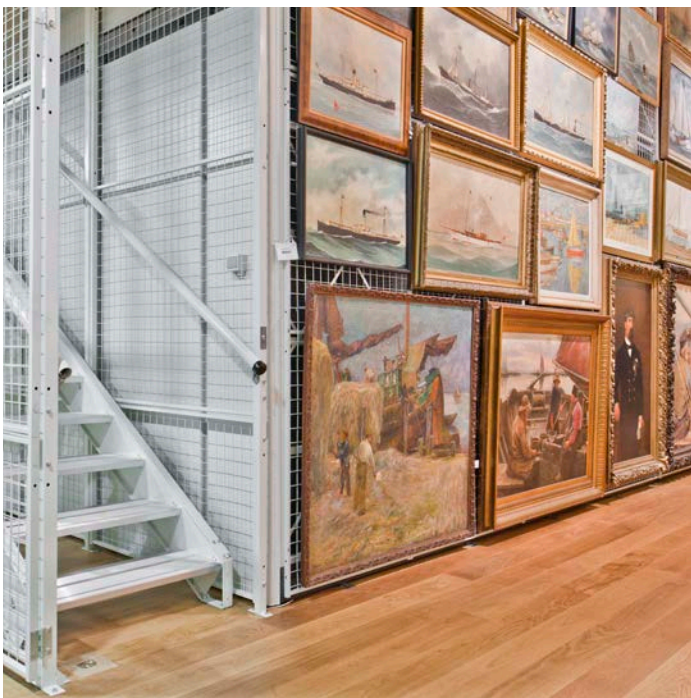

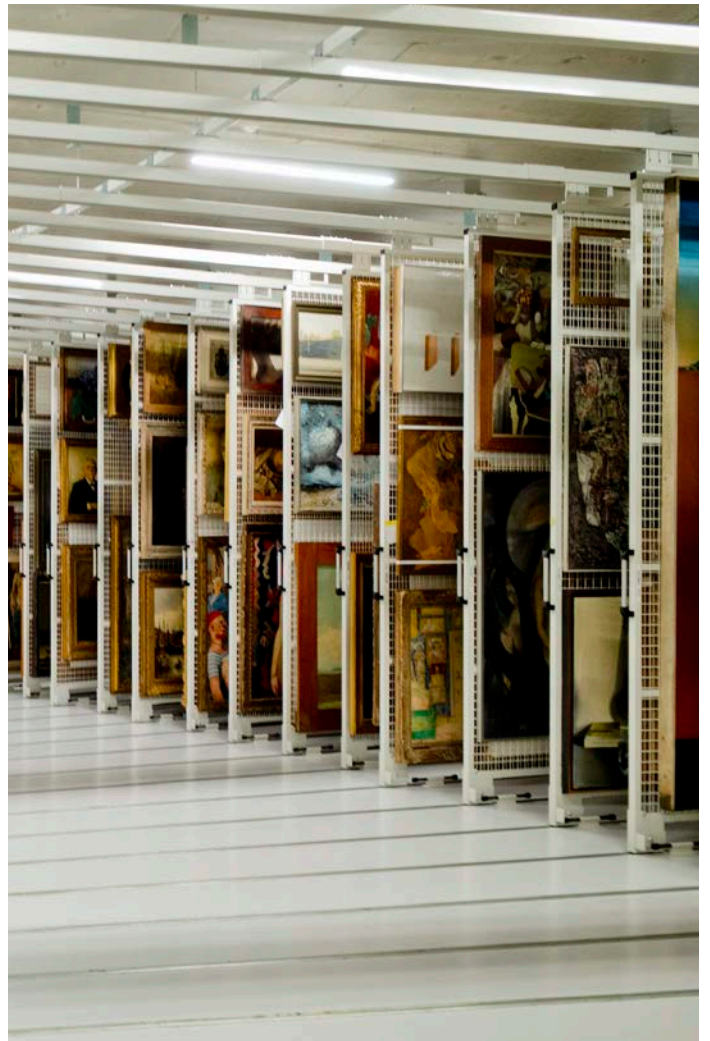

Pull-out art racks provide secure and efficient storage for paintings and other flat artworks. Mesh panels support full-surface hanging and the top-guided design keeps vibration low. Even fully loaded racks move smoothly and require little effort.

Stationary Art Racks

A strong and stable option for painting storage in situations where fixed placement is preferred. Available in single or double sided configurations with durable finishes suitable for long-term preservation.

Two-Tier Electronically Driven Solutions

Two-tier mobile shelving is designed for storage rooms with high ceilings, allowing museums to increase capacity without expanding the floor area. The electronic controls support steady, quiet movement, making daily access safe and comfortable for staff and suitable for delicate objects.

Protecting Collections With Precision

Hermatically Sealed Museum Cabinets

Sealed cabinets that help stabilise conditions for sensitive materials by reducing the effects of humidity changes, dust, pest invasions and pollutants. Suitable for paper, textiles, metals, organic materials and mixed collections that require calm, passive protection.

Modular Drawer Units

Designed for small and fragile objects that benefit from structured and secure storage. Smooth operation, adjustable layouts and protective materials support careful handling of scientific specimens, archaeological items and delicate collection pieces.

Shelving for Textiles and Mixed Media

Created for rolled textiles, archival boxes and mixed materials that require stable and gentle support. Reinforced options offer additional strength for heavier or irregular objects while maintaining clear visibility and easy access.

Trusted by Leading Museums Worldwide
